Homework 7 (15 points)  
Due: Monday, March 22

Enhance the simple graph editor (source code for all classes may be found below) by adding support for the following:

- Rectangular nodes
- Setting node color (provide a palette the user can select from)
- An additional enhancement of your own design (e.g. another node type, another line type, etc.). Your enhancement should be in the form of a new class.

**Turn in only the classes you actually modify or write from scratch.**

Source code for simple graph editor is posted (as txt files) on the lectures page.
