CE6 (formally known as WebCT)

Recently, Blackboard purchased WebCT and all products are now marketed under this new company name. Blackboard will be supporting our legacy WebCT system under the name CE6. This will be the first new product we will be using following the recent acquisition.

CE6 is a set of Course Tools designed to facilitate the delivery of online courses. It is a management tool that is available as a means to deliver your Internet classes. CE6 is sophisticated software that allows faculty to create and maintain online courses. KCC currently uses WebCT Version 4 and is in the process of upgrading to CE6.

The technical support to our current version will be ending soon and here is the current timeline for the upgrade:

2. March 2007: Training, informational websites, and documentation will be announced via regular Tempo announcements and KCELTS's training scheduled.
3. April 7, 2007: IT installation and verification to be complete for the new system.
5. April 2007 - Spring 2008: Migration continues. Please encourage faculty to migrate as soon as possible. Course migration takes less than an hour. Additional time may be necessary for learning the new system depending on the variety of tools instructors use.
6. If there are any questions regarding Blackboard CE6 or migration contact Bonnie Cackoski (x5878). ATAW instructors or course concerns, please contact Alan Peterka (x1248).
