Kirkwood Community College
Daily Project Report

Team Report:
Tim Weishapple:
- An information-gathering patch will be loaded on the network to gain data for bug resolution on Wednesday evening.
- Thursday morning information will be gathered and sent to engineers at Foundry to develop a fix for the technical issues.

Moving Forward:
- We will continue down the current triage path with Matt Oliver working with Foundry technical support with the goal of having a debugged and stable network.
- Both Dascom and Foundry are aware of the critical timing of this resolution and will escalate within the Foundry organization to bring on board additional resources to assist beginning Monday, December 4th.
- All other ongoing installations and testing will continue as planned.

Dustin Reha:
- Work continues on the communication with the Hub. It appears as though there may be an issue with the Renovo software. It does not seem to be telling the decoders which encoders to look at. I can manually force the decoder to watch a certain encoder. However when in a session the switching between sites did not happen automatically. I don't know if the problem with the Renovo talking to the V-brick is related to the network bugs still being experienced, or if it is a separate problem altogether. I will work with both Jim Olson and Matt Oliver tomorrow to determine which it is.

Reminder:  We will have a telephone conference call on Friday December 1st at 10:00 am.
