12/1/2006

Kirkwood Community College
Daily Project Report

Notes from 12/1 telephone conference call:

- We will continue to try to capture information from routers that hang up. A patch has been applied to accomplish this.
- Matt Oliver put up a different test configuration that utilizes bridging instead of routing. We will run this through the weekend to determine if remains stable.
- Kirkwood staff will send large amounts of data traffic through the network to try and force the routers to hang. Any information gathered will be forwarded to Foundry to determine a bug fix.
- Phil Meaney will monitor video quality across the network and report any discrepancies via e-mail to all.
- Dustin Reha will work on classroom control issues.

Reminder: We will have a telephone conference call on Monday December 4th at 8:30 am to discuss the network configuration that will be used.
