Dascom continues to work out video issues on the network. These include:

- Intermittent loss of video and audio. We started working this issue yesterday and continued into the evening hours. Both Rick and Dustin traveled to all five sites to gather information on site-specific issues and how each site is functioning. Today (12/14) we will continue by escalating to Vbrick tech support.
- Communication issues between the DL Navigator and DL hub. Dascom engineers will continue to investigate and resolve today.

**Please Note:** We will have a telephone conference call today at 8:15 am
