Kirkwood Community College
Daily Project Report

Team report:

- Matt Oliver went thru the 2 traces that we took last night and here is what I saw---
  Williamsburg - will file - saw the IGMP membership query go from the switch to a generic multicast address; saw the vbrick respond to this query with a report
  Washington - wash file - saw the IGMP membership query go from the switch to a generic multicast address; never see the vbrick respond to this query.
  The IGMP membership query happens once every 60 seconds. It looks like the vbrick is not responding to the IGMP membership queries but the one in Williamsburg does according to the traces
- More testing is required.
- Dascom will begin classroom turn up
