Extract Processes for I-Strategy and Data Warehouse

End Users input data into Colleague.

Orchestrator Processing

I-Strategy Extract Process extracts data from Colleague and sends to SQL server.

Oracle SQL Server

Processes run on SQL server to aggregate and transform data to dimensions and measures and to cube the information for reporting.

Active Campus running On Sharepoint Server

Reports will be either pre-built reports from I-Strategy or new reports created using ProClarity. Reports will be published to be available on the Sharepoint Server via Active Campus.

End Users will have reporting information available to them based on their assigned roles.
