1. Having a way for someone to enter the 5 projects per month into the system to be scored

2. Having a dropdown listing 5 down to 1 for scoring for each category

3. Having a submit button at the end of the category list

4. Having the data dump into a database (I'll handle the reporting to start with)

5. Having the site Knumber protected and the entries tied to the person's Knumber for uniqueness and error correction
